

Cellenis[®] PRP

Unique Features and Benefits

- **Value for money**

11ml blood draw yielding 6.6ml of PRP with average blood hemocrit.

- **Product quality**

Ability to further concentrate by removing platelet poor plasma after centrifuging. Quality of Cellenis PRP is considered so good that in practice, clinicians use all the PRP fraction with no need to concentrate.

- **Greater patient comfort**

Cellenis anti-coagulant has a physiologically neutral pH.

- **Reduced inflammatory response**

Zero RBC content. Cellenis is a pure PRP without catabolic erythrocyte contamination. Less pain and reduced inflammatory response.

- **Provides longer time for injecting**

No activator added. Cellenis PRP is activated naturally in situ. This means no rush to inject after centrifuging.

- **Patient safety assured**

Unique, and the latest, gel separation technology. Gel undergoes major tests including cytotoxicity. 100% biocompatible.

- **Well engineered centrifuge**

Centrifuge manufactured in the USA with two year warranty.

- **Market leader in the US**

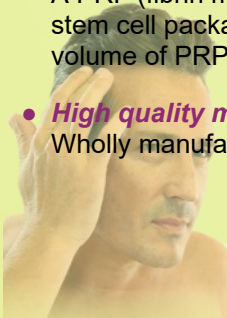

Substantial market leader in the US for aesthetics and hair restoration. Quality reputation guaranteed.

- **Continuing research and innovation**

A PRF (fibrin matrix) is available of the same high quality as Cellenis PRP. Exciting stem cell packages soon to be available. 22ml blood draw tube means an even higher volume of PRP fraction can be obtained.

- **High quality manufacturing process**

Wholly manufactured in Israel, CE certified Class IIb, FDA (510K) approved.
