

Evidence

There are several hundred published papers on the use and effectiveness of Platelet Rich Plasma for a wide range of indications.

Almost all papers comment that PRP systems are not created equal. They differ in preparation methods and quality of PRP. This is true. Cellenis®PRP is proud to stand head and shoulders above other PRP systems.

- Using our first generation PRP system called MyCells, Dr Gilbert Amgar published a pioneering [study](#) using objective parameters to assess outcomes on facial rejuvenation.
- A [similar study](#) using objective parameters by Dr Amgar was published for hair restoration under the Cellenis umbrella brand name Tropocells.

Studies are ongoing into a number of other indications as well as investigating optimal protocols
